

ALAP PUTATUNDA

FULL-STACK AI ENGINEER | AI-NATIVE PRODUCT DEVELOPMENT

Remote worldwide from India | Ready to relocate with visa sponsorship

hi@scalewithalap.com | scalewithalap.com | linkedin.com/in/scalewithalap | github.com/scalewithalap

Summary

- Technical founder who spent 6+ years running a pharmaceutical company end-to-end — technology, operations, **a team of 20+ members, Rs.7.5+ Crore (~\$784K USD) in revenue**. Began building AI-native products part-time in 2024 alongside my role as Co-founder & CTO of Pharmison Valentes. Transitioned to a full-time commitment in February 2025 upon stepping into a non-executive role on the Board of Directors.
- Currently a Full-stack AI Engineer who specializes in building AI-native SaaS, AaaS (Agents as a Service), multi-agent systems, automations, AI agents, business websites, mobile applications, and MCP servers. Has production level experience in integrating provider-agnostic LLM layers, Retrieval-Augmented Generation (RAG), and semantic search. Uses AI IDEs and coding agents across architecture, implementation, testing, review, and deployment while retaining ownership of security and release quality.

Technical Skills

- **AI agents, frameworks and LLM systems:** Agentic AI, multi-agent orchestration, tool calling, Model Context Protocol (MCP), JSON-RPC 2.0, persistent memory, context engineering, RAG, embeddings, semantic search, vector databases (pgvector), structured outputs, intent classification, prompt engineering, model routing and failover, token metering, guardrails, human-in-the-loop workflows, LangChain, OpenRouter, AWS Bedrock, OpenAI API, Gemini API, and Claude API.
- **AI IDEs and coding agents:** Google Antigravity, Cursor, Claude Code, Codex, OpenCode, Visual Studio Code, Google AI Studio, Android Studio.
- **AI automation & integrations:** Trigger.dev, Inngest, QStash, n8n, Zapier, Composio, Cal.com, Resend, Notion API, GitHub API, and integration of major CRMs via APIs.
- **UI/UX and frontend:** Figma, Framer, Webflow, Google Stitch, Claude Design, React, React Native, Next.js, Vite, Tailwind CSS, shadcn/ui, Radix UI, GSAP, Motion, Zustand, responsive design, accessibility, i18n.
- **Full-stack engineering:** TypeScript, Python, JavaScript, SQL, Node.js, REST APIs, webhooks, SSE, microservices, PostgreSQL, Supabase, Row-Level Security (RLS), Drizzle ORM, Prisma, Redis, WebAuthn, RBAC, rate limiting, webhook idempotency, PII redaction, OWASP Top 10.
- **Payment gateways integrations:** Stripe, Dodo Payments, Polar, Lemon Squeezy, Creem, Paddle, RazorPay.
- **Cloud and delivery:** AWS, Vercel, Git, GitHub Actions, CI/CD, Vitest, Playwright, Sentry, PostHog, Langfuse.

Experience

Full-stack AI Engineer | Scale with Alap (Portfolio & Personal Brand) | *Started in Feb 2025*

- Began building AI-native products part-time in 2024 alongside my role as Co-founder & CTO of Pharmison Valentes. Transitioned to a full-time commitment in February 2025 upon stepping into a non-executive role on the Board of Directors.
- Shipped Scale with Alap, Vibe44, Zero Headache, and OpenUI, as measured by live public deployments, by owning architecture, engineering, testing, CI/CD, deployment, and documentation.
- Established AI-native delivery across five stages, as measured by specification, implementation, testing, automated review, and CI workflows, by using Cursor, Claude Code, Codex, Windsurf, Google Antigravity, OpenCode, and GitHub Copilot.

Co-founder & Former CTO | Pharmison Valentes Pharma Pvt. Ltd. (Pharmaceutical) | *May 2019 – Present*

- Co-founded a registered Indian pharmaceutical company and led all technology end-to-end for six years, growing the business to more than **Rs.7.5 Crore (~\$784K USD)** in cumulative revenue while owning the website pharmison.com, employee reporting, and the operational systems supporting day-to-day business — including a team of **20+ members** across Medical Representatives, Managers, Accountant, HR & Admin.
- Now holds a non-executive Director and Shareholder position with no active operational role.

Project Portfolio

Portfolio OS – Interactive macOS-style Portfolio (Open-sourced) | Live – scalewithalap.com

- Built a custom web window manager recreating macOS and iOS desktop interfaces, supporting window dragging, resizing, edge and quadrant snapping, z-index focus management, and minimize/restore animations across 39 components.
- Centralized state across 30+ fields using Zustand and Immer, lazy-loaded 13 apps with React.lazy and Suspense, and implemented 60 FPS dock animations using requestAnimationFrame and GPU-accelerated transforms.

Vibe44 – The Next.js AI SaaS Starter Kit | Marketing site, Documentations & MCP Server | Live – vibe44.com

- Implemented a serverless Model Context Protocol (MCP) server from scratch using JSON-RPC 2.0, providing 6 tools, 4 resource templates, IP-based rate limiting, and /llms.txt endpoints for AI agent and RAG ingestion.
- Built idempotent Creem payment webhook handlers to automate post-purchase fulfillment, triggering GitHub repo invites, single-use Cal.com booking links, transactional Resend emails, and parallel Notion database syncs.

Vibe44 – The Next.js AI SaaS Starter Kit for Committed Builders | Demo site | Live – demo.vibe44.com

- Developed a Next.js 16 AI SaaS codebase (~165k lines across 687 files) using a Universal Adapter Pattern to support streaming, structured output, and runtime model switching across 4 LLM providers with a PII-redacting RAG pipeline.
- Engineered backend infrastructure with a 32-table PostgreSQL schema using Row-Level Security, integrating 5 payment gateways, 9 analytics providers, 4 fallback email services, WebAuthn, QStash/Trigger.dev background jobs, and 900+ unit and Playwright E2E tests.

Zero Headache – Fully managed AI front desk for service businesses | Marketing site | Live – zeroheadache.co

- Built and launched a Next.js 16 and React 19 marketing site with TypeScript, Tailwind CSS 4, Motion, and Lenis, featuring an interactive ROI calculator, product coverage for 12 channels, 35+ CRM integrations, and structured JSON-LD schemas.
- Configured strict CSP, HSTS, clickjacking, and cross-origin security headers while optimizing accessibility and rendering performance through semantic HTML, accessible form controls, and responsive SVGs.

OpenUI – The Local-First UI Design Platform. An Open-source Google Stitch Alternative | Live – github.com/scalewithalap/openui

- Built an open-source, local-first UI design tool using Next.js 16, React 19, Tailwind CSS 4, SQLite, Prisma 7, and the Vercel AI SDK, enabling offline UI generation across 4 AI providers without requiring accounts, subscriptions, or cloud storage.

Make Me Sound – An AI-powered Communication Copilot | In Active Development – makemesound.xyz

- Building a parallel multi-stream engine that converts drafts into 105 tone variations with sub-second streaming; expanding across web, desktop, browser, and mobile clients.

Freecom AI – An Open-Source AI-Agents-powered eCommerce Platform | In Development (80% Complete) – github.com/scalewithalap/freecom-ai

- Building an open-source digital-download commerce platform with a self-hosted Store Manager Agent and a cloud agent swarm for SEO, content, marketing, analytics, and support with human approval controls.

Note: My complete portfolio, featuring additional projects, is available at scalewithalap.com.

Education

- I enrolled in the **Bachelor of Computer Applications (BCA)** at **JIS College of Engineering, Kalyani**, in 2018. In 2020, during my 2nd year, I left the degree to focus full-time on building products & running the business.

Recognition

- **“The Founding 500” Program by Hyperagent (by Airtable) on 2 June 2026:** Selected as a member of The Founding 500 program by Hyperagent and awarded US\$20,000 in platform credits to build & run AI agents. <https://hyperagent.com/s/6YBNB4VIO26vErBhadK36w>
